

Description

Ixoo 12v Motorhome Hair Dryer in White with 3m Cable

This new hair dryer system fits into your motorhome or caravan using your existing heating systems impulsed air. The ixoo can be installed on any wall of your vehicle, allowing you to connect it to the heating tube of your Truma system or Webasto system.

Using a Truma based system: Simply open the air outlet and put the inner fin vertical, put ixoo in and press until its in place and connect to a 12v output.

Using a Webasto based system: Simply remove the outside part of the air outlet and insert ixoo, press down until it is in position and connect to a 12v output.

This hairdryer system can be permanently mounted in your vehicle or can be mounted so it can be removed depending on your needs.

For Winter Use:

Start the ixoo machine and connect the heating and set the thermostat to the desired temperature. You can now enjoy the experience! If you need more air power or air temperature, you can close other air outlets, the more you close the more power concentrated on the one you are using.

For Summer Use:

Start the ixoo machine, close all air exits and connect the heating with the thermostat set to the maximum temperature. When the air reaches the desired temperature you can stop the heating and continue enjoying about 10 minutes of hot air without increasing the temperature of your motorhome.
